

A New Golden Age for American Technological Progress

Our Mandate

The 2024 election marked a turning point. America stands on the edge of a new era—a Golden Age driven by bold leadership, visionary tech minds, and the looming creation of AGI / ASI. From space to healthcare to energy and everything in between, we have the possibility to rapidly accelerate progress and create a world of unparalleled abundance in America.

We are also at a crossroads where world superpowers are fighting to control what could be the most important technological development in our lifetime. The risk of the wrong country owning the future is dire. At American General Intelligence, we aim to do our part. We are an **AI Lab dedicated to building technology for America in the coming AI arms race** so that American principles and democracy can continue to triumph in the world. We were founded on one simple core belief: **America's best days are not behind us—they're ahead of us.** Through our advancements and others, we aim to make that true.

\$AGI

2025 is the era of agents, and none will hold higher importance than personal assistants. They will mold our world, shape our reality, and act on our behalf. We are creating fundamental frameworks for what will be the **world's most advanced general-purpose personal assistants** and using those to release a series of vertical-specific agents acting as public goods for American prosperity across media, health, science, etc. Each will serve to make a fundamental advancement in an area we deem to be of critical importance to America's technical superiority and societal welfare. Collectively, they'll contribute to what we believe is of paramount importance: American General Intelligence ("AGI").
